

Objective:

To secure a software testing position where I can leverage my expertise in manual, API, and database testing to enhance software quality and support organizational growth.

Professional Summary:

Dedicated QA Tester with over 2+ years of experience in manual and automated testing, including web, mobile, and API testing. Proven ability to identify and resolve defects, ensuring software quality.

Skills:

- Testing Tools : Test Rail, JIRA, Postman, SoapUI, Swagger, ADO
- Testing Techniques : Manual Testing, API Testing, SQL Testing, Regression Testing
- Programming Languages : SQL
- Methodologies : Agile-Scrum, SDLC, STLC
- Mobile Testing : Android application testing using 'apk' files.

Work Experience:**IBM - QA Manual Tester | Jan 2022 – Present**

- Project 2 | OnBuy e-commerce platform
 - Conducted comprehensive functional testing of the e-commerce platform, ensuring seamless user experience and system performance.
 - Developed and executed test cases for various modules, including user authentication, product search, and payment processing.
 - Collaborated with the development team to identify, document, and resolve over 200 critical and high-priority defects.
 - Reported & tracked bugs using JIRA, leading to 30% reduction in critical issues before deployment.
- Project 1 | Hola.Health
 - Performed end-to-end testing of the healthcare management system, covering patient registration, appointment scheduling, and medical records management.
 - Conducted API testing using SoapUI to validate the interoperability between different modules, ensuring data integrity and compliance with healthcare regulations.
 - Contributed to the preparation of test documentation and reports, enhancing test coverage and traceability.
 - Collaborated with cross-functional teams in Agile sprints to ensure timely delivery of high-quality features.

Education:

- B.Tech in Computer Science | RVS College of Engineering and Technology, JSR
- 12th Grade || 10th Grade | Dayanand Public School, JSR
